PROFILE

An aspiring Product Manager and Business Analyst with 3 years of experience at Signify (formerly Philips Lighting) spanning data engineering, SAP consulting, and finance operations. Proven ability to take ownership of product initiatives end-to-end, align cross-functional stakeholders, build data pipelines, and define KPI frameworks that drive decisions. Complemented by formal PM training through the Nextleap Fellowship, published product teardowns, and a personal app project currently in active development. Looking to bring structured product thinking and a data-first approach to a PM or BA role.

PROFESSIONAL EXPERIENCE

Signify (formerly Philips Lighting) · Bangalore

Business Analyst

Jul 2023 - Dec 2025

- Took ownership of the **Corporate Card product** (SAP ABAP), working with **200+ employees** to gather requirements, shape the roadmap, and integrate expense reporting with treasury operations, cutting manual workflows by **30%**.
- Worked alongside the **Philips Hue PM team** on go-to-market execution for a **50,000+ user base**, aligning fiscal, warehouse, and marketing stakeholders while delivering user behavior analytics that fed directly into feature prioritization.
- Built an end-to-end data pipeline ingesting operational data from Signify's **global street light network** via APIs, processed it using Python, loaded into Snowflake, and delivered region-specific Power BI dashboards for worldwide field performance monitoring.
- Managed TRM and cash management operations handling **500+ monthly payments** while designing a **KPI tracking framework** across 25+ monthly financial reports, surfacing insights that gave leadership faster, clearer decision-making.
- Spotted recurring patterns in daily EOD job failures through root cause analysis, cutting errors by **90%**, while directing **10+ ICS audits** annually to sustain 100% regulatory compliance.

SAP Finance Operations Intern

Jan 2023 - Jul 2023

- Resolved ServiceNow incidents for Concur expense workflows by digging into business requirements and updating audit rules, bringing ticket resolution time down by **25%**.
- Supported SAP Finance Treasury operations and got hands-on with cash management workflows and cross-team payment processing.

PRODUCT MANAGEMENT TRAINING

Product Manager Fellow | *Nextleap*

2025

- Completed an 8-week intensive covering the full PM lifecycle: discovery, problem framing, user research, wire-framing, prototyping, and success metrics definition.
- **Capstone PRD:** Delivered a complete B2C Product Requirements Document including user personas, competitive analysis, a RICE-prioritized feature backlog, wireframes, and North Star metrics with measurable KPIs.
- Covered frameworks including RICE prioritization, Jobs-to-be-Done, user story mapping, OKR setting, and go-to-market planning across 8 structured modules.

PROJECTS

Group Riding Companion App (Working Title) (Personal Project, In Development)

2026

- Identified a real gap in the Indian biking community: group rides fall apart mid-route because riders have no safe way to stay connected while moving at highway speeds. WhatsApp calls while riding are illegal under the Motor Vehicles Act and genuinely dangerous.
- Designed a two-mode app: **Active Ride Mode** with real-time group tracking, a one-button push-to-talk system, and automatic emergency detection (triggers alert to all party members within 35 seconds of a sudden stop); and **Community Mode** with KYC-verified ride discovery and a mutual rating system.
- Completed a full PRD covering problem statement, 3 detailed user personas (with interviews from Delhi, Pune, and Bangalore biking communities), competitive analysis (Mytra, Riding Verse, WhatsApp, Google Maps),

feature specifications with P0/P1/P2 prioritization, user flows, notification strategy, and 6-month success metrics.

- Completed UI design for all core screens (27/27 built), now in active development. Built in Flutter, targeting Android and iOS.

Inshorts Product Teardown: Recommendation and Notification Strategy

- Proposed a News Quality Score to shift away from pure engagement-based ranking toward source credibility, factual density, and uniqueness, targeting 40% editorially curated content per feed.
- Redesigned the notification system into three tiers (Breaking, Daily Digest, Weekly Roundup) with category-level opt-in to improve retention without increasing opt-outs.

Khan Academy Teardown: Growth, Engagement and AI Strategy

- Identified that only 11% of 945K licensed students were activating the product. Proposed a streak-based engagement overhaul to grow DAU/MAU from 15% to 25% and proactive Khanmigo AI nudges to lift interaction from 5% to 30%.
- Recommended international B2B expansion via a KAD Lite offering and repositioning against Duolingo on depth versus breadth of learning.

Secondary TAT: Supply Chain Analytics Dashboard

- Built a post-invoice delivery KPI framework with automated Paginated Report alerts to keep regional managers ahead of shipment delays. Stack: Python, SQL, Snowflake, Amazon S3, Power BI.

EDUCATION

B.Tech in Computer Science | *SRM Institute of Science and Technology* Jul 2019 - May 2023
CGPA: 8.7 | Chennai

Class XII (PCM with Computer Science) | *Air Force Golden Jubilee Institute* 2019
88.8% | Delhi

SKILLS

Product and Strategy: Roadmap Development, Feature Prioritization (RICE), PRD/BRD Writing, Requirements Gathering, User Research, User Personas, Competitive Analysis, Product Discovery, Go-to-Market Strategy, A/B Testing, KPI/OKR Tracking, Agile/Scrum, Sprint Planning, Backlog Management, Stakeholder Alignment

Analytics and Data: SQL, Python, Power BI, Tableau, Snowflake, Google Analytics, CleverTap, Qlik Sense, Process Mapping, Data-Driven Decision Making

Technical: SAP (FICO, TRM, ABAP), JavaScript, React, Node.js, HTML/CSS, REST APIs, GCP, Git/GitHub, Amazon S3

Design and Tools: Figma, Miro, Wireframing, JIRA, Confluence, Notion, Trello, ClickUp, Excel, ServiceNow, Concur

INTERESTS

Biking and building Chalo, a community riding app currently in active development | Running | Music | Sports enthusiast following basketball, football, cricket, F1, UFC, and tennis, including fantasy football and performance analytics
